Professional Summary

Ambition Focused - Detail-oriented Computer Systems Technology student with hands-on experience in software development, scripting, automation, and data analysis. Experienced developing applications and technical solutions using Python, Java, React, TypeScript, SQL, JavaScript, and REST APIs. Strong understanding of debugging, testing, object-oriented programming, networking fundamentals, and cross-functional collaboration. Passionate about innovation, problem solving, and building user-focused application systems that improve operational efficiency and user experience. Eager to contribute to collaborative technology teams while continuing to develop technical and analytical skills.

Experience

Niagara Energy Products

Location: Niagara, ON

Finance/IT (Co-op)

January 2026 - April 2026

- Automated reporting and data validation workflows using Python and Excel to improve operational efficiency and reduce manual processing
 - Assisted with troubleshooting technical issues and supporting internal application and system processes
 - Collaborated with cross-functional teams to analyze operational requirements and resolve technical challenges
 - Supported data analysis and reporting initiatives to assist business decision-making and workflow improvements
 - Created technical documentation and process artifacts to support operational and development activities
 - Applied analytical, debugging, and problem-solving skills within a fast-paced technical environment
-

Projects

1. Network Traffic Analysis Tool | Python | Scapy

- Developed a Python-based application to monitor and analyze live TCP/IP network traffic data
- Implemented filtering and detection logic to identify repeated connection attempts and abnormal traffic behavior
- Applied debugging, testing, and analytical techniques to improve application reliability and functionality
- Strengthened understanding of networking fundamentals, scripting, and real-time data processing workflows

2. OSINT Global Intelligence | React | TypeScript | SQL

- Developed a web-based dashboard using React and TypeScript to organize and visualize structured data dynamically
- Designed user-focused interfaces and integrated data workflows to improve usability and operational visibility
- Collaborated on frontend functionality, debugging, and application design across multiple components
- Strengthened experience with application development, APIs, database interaction, and cross-platform technologies

3. Weather App | Python | JSON | openweather API

- Developed a Python application that consumed REST API data to display real-time weather information dynamically
- Parsed JSON responses and implemented exception handling to improve reliability and user experience
- Applied scripting, debugging, and testing techniques throughout the software development lifecycle

4. Web Server Log Analyzer | Python | .txt file

- Developed a Python-based log analysis application to process and summarize large volumes of structured server data
- Automated data extraction workflows to identify failed login attempts, error rates, and traffic activity trends
- Applied analytical, debugging, and scripting skills to improve operational reporting and application efficiency

5. Banking Account Management System | Java, OOP

- Developed a console-based banking application using Java and object-oriented programming principles
- Implemented features including account creation, deposits, withdrawals, and transaction tracking
- Applied core Java concepts including classes, methods, conditionals, loops, and data structures
- Strengthened understanding of software development, debugging, and application logic design

Technical Skills

Programming Languages:

Python, Java, JavaScript, TypeScript, SQL, HTML, CSS, Bash, PowerShell

Frameworks & Technologies:

React, REST APIs, JSON, Tailwind CSS

Software Development:

Object-Oriented Programming (OOP), Debugging, Testing, Application Development, System Integration, Data Structures & Algorithms (DSA), Technical Documentation

Data & Analytics:

Microsoft Excel, Data Analysis, Reporting, Workflow Automation

Systems & Networking:

TCP/IP, DNS, OSI Model, Networking Fundamentals, Multi-Platform Systems

Tools & Platforms:

Git, GitHub, VirtualBox, VMware, Microsoft Office 365

Education + Certification

George Brown College/Polytechnic

Computer Systems Technology - Advanced Diploma (3 years)

Location: Toronto, ON

Graduating
